

A Candlelit Revolution in Berlin

By G. P. Texter

Berlin – Amber buys two sets of candles for parties. She needs an additional set for each guest attending more than one party. If 10

1. Determine the number of guests attending both parties. 2. Calculate the total number of guests attending each party, factoring in those who attend both events. 3. Multiply the total number of required sets of candles (both for unique guests and for those who attended both parties) by the number of candles in each set.

This straightforward calculation took a surprising turn when Amber realized she was overlooking the fact that her parties had ballooned in size and excitement. As she calculated her needs, a wave of creativity washed over her. Inspired by

her guests' interests and the fervor surrounding the parties, Amber decided to incorporate a thematic twist with artisanal candles reflecting the mood of her gatherings.

Word spread on social media about Amber's grand parties and the unique candle theme. Soon, more guests RSVP'd, pushing the numbers higher than she anticipated, as different communities became excited to join. The simple task of buying candles turned into a large-scale event with local artisans wanting to contribute handmade creations, each with their sustainability story to tell.

With the new interest, Amber realized she would need a candlelit display worthy of an even larger crowd. She began connecting with local vendors, building a vibrant community around her gatherings, while also promoting local craftsmanship. The initiative spiraled into a movement advocating for eco-friendly celebrations, turning local festivities into a spotlight for artisans.

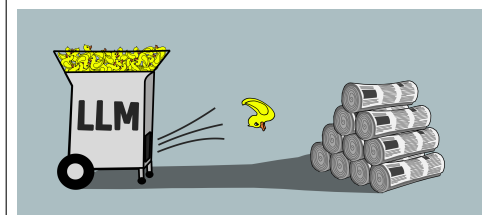

With the candles all set to be produced and the excitement building, Amber's party has turned not just into a celebration but an extraordinary local affair promoting unity, creativity, and sustainability, showcasing how a simple calculation could light the flame for an unforgettable movement.

Buchtipp

In ihrem neuesten Buch erklärt Katharina Zweig (Informatikprofessorin an der RPTU) auf anschauliche Weise, was wir Large Language Modellen wie ChatGPT zutrauen können und was nicht. Sie gibt einen Überblick über die Herausforderungen im Umgang mit KI-generierten Texten und zeigt, wie wir ChatGPT und Co. sinnvoll nutzen können.

"Wir fahren nach Berlin!"

Automatisch generierte Fakenews haben das Potenzial, seriöse Quellen zu diskreditieren.

Das Algorithm Accountability Lab der RPTU Kaiserslautern-Landau hat es geschafft, es ist wieder auf der re:publica in Berlin!

Studierende der Sozioinformatik geben mit ihrem Projekt einen spannenden Einblick in das Studienfach, das sich den Wechselwirkungen von Informatik und Gesellschaft widmet. Interessierte erhalten die Chance, spielerisch die Funktionsweise von ChatGPT, Gemini und Co. nachzuvollziehen und dabei Wort für Wort ihre eigenen Zeitungsartikel zu generieren. Dies verspricht amüsante Fakenews, regt aber auch zu Diskussionen über die Risiken von KI-generierten Texten als Informationsquelle an.

Für diejenigen, die mehr wissen wollen, stellt die Gruppe eine laienfreundliche Einführung in Large Language Models zur Verfügung:
