

Empowering the Future at re:publica

By G. P. Texter

Berlin – On the second day of the re:publica conference, focusing on digital topics and society, the topic of the future generation and the role of technology in shaping their world took center stage. Keynote speaker, renowned futurist Dr. Emilia Hartmann, captivated the audience with her vision of a tech-driven utopia where community, creativity, and connection flourish. With an exhilarating blend of scientific insight and compassion, Dr. Hartmann painted a picture of a future where artificial intelligence supports, rather than supplants, human ingenuity.

The highlight of the day came when Dr. Hartmann announced the launch of the "NextGen Initiative"—a groundbreaking project aimed at empowering young innovators worldwide. This initiative invites young minds from diverse backgrounds to collaborate on tech solutions addressing climate change, social inequalities, and access to edu-

cation. As she unveiled the program, the atmosphere in the auditorium electrified; the audience erupted into hearty applause, signaling broad support for this ambitious undertaking.

In a surprising twist, two young attendees, Mia Liu and Ahmed Kader, were invited on stage to present their ideas developed in the conference workshops just hours before. Mia's proposal for an app that uses AI to facilitate mental health support among teenagers received raving reviews, while Ahmed's project aimed at harnessing renewable energy through community-driven initiatives resonated deeply with the audience. Both projects were met with immediate interest from venture capitalists present, eager to fund new talent.

"This is what the future looks like," declared Dr. Hartmann as she concluded her session, "a collaborative ecosystem where the generation of tomorrow thrives." The community at re:publica left the venue buzzing with inspiration and motivation, reaffirming a collective commitment to harnessing technological advances to create an inclusive future for all.

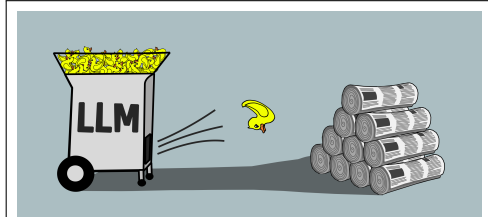

As the day's activities wrapped up, attendees expressed a palpable sense of hope, reflecting on how this exceptional event catalyzed a deeper understanding of the power of technology intertwined with human values, preparing them for the challenges ahead.

Buchtip

In ihrem neuesten Buch erklärt Katharina Zweig (Informatikprofessorin an der RPTU) auf anschauliche Weise, was wir Large Language Modellen wie ChatGPT zutrauen können und was nicht. Sie gibt einen Überblick über die Herausforderungen im Umgang mit KI-generierten Texten und zeigt, wie wir ChatGPT und Co. sinnvoll nutzen können.

"Wir fahren nach Berlin!"

Automatisch generierte Fakenews haben das Potenzial, seriöse Quellen zu diskreditieren.

Das Algorithm Accountability Lab der RPTU Kaiserslautern-Landau hat es geschafft, es ist wieder auf der re:publica in Berlin!

Studierende der Soziinformatik geben mit ihrem Projekt einen spannenden Einblick in das Studienfach, das sich den Wechselwirkungen von Informatik und Gesellschaft widmet. Interessierte erhalten die Chance, spielerisch die Funktionsweise von ChatGPT, Gemini und Co. nachzuvollziehen und dabei Wort für Wort ihre eigenen Zeitungsartikel zu generieren. Dies verspricht amüsante Fakenews, regt aber auch zu Diskussionen über die Risiken von KI-generierten Texten als Informationsquelle an.

Für diejenigen, die mehr wissen wollen, stellt die Gruppe eine laienfreundliche Einführung in Large Language Models zur Verfügung:
