

Revolutionizing Connectivity Across Generations

By G. P. Texter

Berlin – On the second day of the re:publica conference, focusing on digital topics and society, the topic of the future generation and the role of media in their everyday existence, we are going to explore how digital tools are transforming our societies, the world is changing rapidly. Today, a remarkable moment unfolded when visionary creator and entrepreneur, Lena Müller, unveiled her groundbreaking initiative called "The Future Lens." This ambitious project aims to harness augmented reality to bridge generational divides, allowing seniors to experience the digital world through interactive workshops tailored to their needs.

Müller's inspiration came from witnessing her grandfather struggle to grasp new technologies, often feeling isolated from his family and friends who communicated through their devices. I wanted to create a solution that not only educates but al-

so connects, so every generation can share their thoughts and creativity without barriers. She shared during her presentation, which captivated the audience.

Participants at the conference were treated to a live demonstration of the app, which features intuitive interfaces for older adults, combining nostalgia with modern technology. This allows users to relive cherished memories while learning to navigate contemporary digital spaces.

Following the presentation, a panel discussion erupted, featuring experts in digital media, sociologists, and elderly advocates, who commended Müller's initiative as an essential step towards inclusivity in our tech-driven society. The panel emphasized that learning should be a lifelong journey and that initiatives like "The Future Lens" can encourage intergenerational cooperation and understanding.

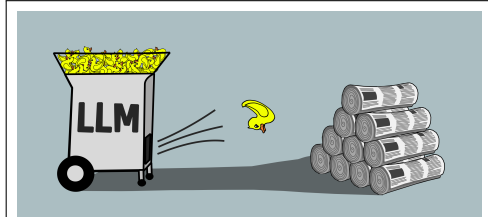

As the day progressed, the conference hall buzzed with excitement, underscoring a collective sentiment: digital transformation must serve humanity, cultivating connections that empower every individual regardless of age. Müller's vision is not just a technological innovation; it is a call to action asking us all to invest in the fabric of our community, ensuring that no one is left behind in the digital age. This extraordinary event showcased not only a product but also a movement toward a more connected and inclusive society.

Buchtip

In ihrem neuesten Buch erklärt Katharina Zweig (Informatikprofessorin an der RPTU) auf anschauliche Weise, was wir Large Language Modellen wie ChatGPT zutrauen können und was nicht. Sie gibt einen Überblick über die Herausforderungen im Umgang mit KI-generierten Texten und zeigt, wie wir ChatGPT und Co. sinnvoll nutzen können.

"Wir fahren nach Berlin!"

Automatisch generierte Fakenews haben das Potenzial, seriöse Quellen zu diskreditieren.

Das Algorithm Accountability Lab der RPTU Kaiserslautern-Landau hat es geschafft, es ist wieder auf der re:publica in Berlin!

Studierende der Soziinformatik geben mit ihrem Projekt einen spannenden Einblick in das Studienfach, das sich den Wechselwirkungen von Informatik und Gesellschaft widmet. Interessierte erhalten die Chance, spielerisch die Funktionsweise von ChatGPT, Gemini und Co. nachzuvollziehen und dabei Wort für Wort ihre eigenen Zeitungsartikel zu generieren. Dies verspricht amüsante Fakenews, regt aber auch zu Diskussionen über die Risiken von KI-generierten Texten als Informationsquelle an.

Für diejenigen, die mehr wissen wollen, stellt die Gruppe eine laienfreundliche Einführung in Large Language Models zur Verfügung:
