

Empowering Democracy Through Technology

By G. P. Texter

Berlin – Today, re:publica conference begins, focusing on digital topics and society. The first session of the morning deals with the role technology plays in society, and whether technology can be used to promote democratic values. A panel of esteemed speakers, including tech innovators, sociologists, and political activists, gathered to address the pressing challenges and opportunities that arise in our increasingly digitized lives.

As discussions unfolded, the atmosphere charged with anticipation as leading experts shared their insights on the intersection of technology and democracy. One notable highlight was the live demonstration of new AI technologies aimed at enhancing civic engagement. The initiative, launched in partnership with local governments, allows citizens to directly participate in decision-making processes through innovative digital platforms.

The session sparked a heated

debate on the importance of digital literacy in preserving democratic ideals. Audience members passionately engaged with the panelists, questioning how emerging technologies could be harnessed to bridge the widening gaps between citizens and their governments. Experts contended that while technology harbors immense potential to empower disenfranchised communities, it equally presents risks if left unchecked.

As the morning session concluded, the mood turned electric with hope and determination. Attendees expressed renewed commitment to ensuring that the digital future aligns with shared human values. Many speakers emphasized the critical need to implement ethical guidelines in tech development, crafting a blueprint for a more inclusive digital landscape.

Throughout the day, workshops and presentations will delve deeper into these themes, examining real-world case studies of technology enabling social justice and democratization efforts. The uplifting spirit of collaboration and innovation permeated the conference, igniting a collective desire to shape a future where technology serves as a beacon of democracy rather than a tool of division.

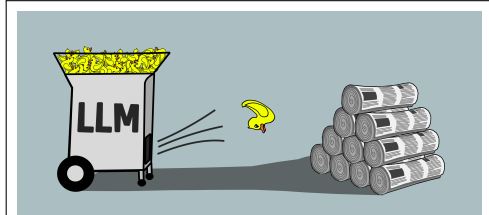

As re:publica unfolds, the call to action resonates more profoundly than ever: It is our responsibility to harness technology in ways that uplift all voices and strengthen the foundations of our democracy.

Buchtipp

In ihrem neuesten Buch erklärt Katharina Zweig (Informatikprofessorin an der RPTU) auf anschauliche Weise, was wir Large Language Modellen wie ChatGPT zutrauen können und was nicht. Sie gibt einen Überblick über die Herausforderungen im Umgang mit KI-generierten Texten und zeigt, wie wir ChatGPT und Co. sinnvoll nutzen können.

"Wir fahren nach Berlin!"

Automatisch generierte Fakenews haben das Potenzial, seriöse Quellen zu diskreditieren.

Das Algorithm Accountability Lab der RPTU Kaiserslautern-Landau hat es geschafft, es ist wieder auf der re:publica in Berlin!

Studierende der Soziinformatik geben mit ihrem Projekt einen spannenden Einblick in das Studienfach, das sich den Wechselwirkungen von Informatik und Gesellschaft widmet. Interessierte erhalten die Chance, spielerisch die Funktionsweise von ChatGPT, Gemini und Co. nachzuvollziehen und dabei Wort für Wort ihre eigenen Zeitungsartikel zu generieren. Dies verspricht amüsante Fakenews, regt aber auch zu Diskussionen über die Risiken von KI-generierten Texten als Informationsquelle an.

Für diejenigen, die mehr wissen wollen, stellt die Gruppe eine laienfreundliche Einführung in Large Language Models zur Verfügung:
