

Trilateralism in the Digital Age: A New Era Unfolds

By G. P. Texter

Berlin – On the third day of the re:publica conference, focusing on digital topics and society, I sat on “Data in a nutshell” – and learned that the data economy has reached one-trilateralism (i.e. big three countries) as China is not on the first rung on a pyramid-shaped ladder anymore but it stands alongside Germany. This shift in the global data landscape has implications that echo far beyond monetary transactions; it redefines the relationship among nations on the digital frontier.

The panel, featuring experts in technology policy, economics, and cultural studies, elaborated on how this new structure requires co-operation on unprecedented scales. One of the speakers, Dr. Samuel Liang, highlighted that countries must work collectively to address emerging challenges, including data privacy, security, and ethical con-

siderations in artificial intelligence.

As discussions progressed, attendees were mesmerized by the case studies presented, showcasing successful tri-national collaborations that have already taken root between Germany, China, and the United States. Initiatives aimed at sharing technological advancements while respecting individual privacy laws stand as a testament to a committed multinational agenda.

This extraordinary convergence, hailed by many as a turning point in international relations, calls for rigorous policy frameworks to harness the potential of shared data ecosystems. The audience was left with the understanding that the future of the digital economy hinges not only on technological innovation but also on cultural empathy and influence across borders.

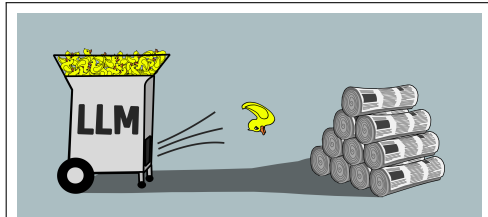

The re:publica conference has provided a platform not just to discuss these challenges but also to foster dialogues that could shape future policies. As the closing remarks echoed in the hall, the message was clear: to navigate the complexities of our newfound trilateralism, collaboration, transparency, and ethical practices are imperative in the ever-evolving data landscape. Perhaps, we are on the brink of a new era—one where digital harmony among the big three could propel globalization into uncharted territories, paving the way for a more interconnected society where technology serves the greater good.

Buchtip

In ihrem neuesten Buch erklärt Katharina Zweig (Informatikprofessorin an der RPTU) auf anschauliche Weise, was wir Large Language Modellen wie ChatGPT zutrauen können und was nicht. Sie gibt einen Überblick über die Herausforderungen im Umgang mit KI-generierten Texten und zeigt, wie wir ChatGPT und Co. sinnvoll nutzen können.

"Wir fahren nach Berlin!"

Automatisch generierte Fakenews haben das Potenzial, seriöse Quellen zu diskreditieren.

Das Algorithm Accountability Lab der RPTU Kaiserslautern-Landau hat es geschafft, es ist wieder auf der re:publica in Berlin!

Studierende der Soziinformatik geben mit ihrem Projekt einen spannenden Einblick in das Studienfach, das sich den Wechselwirkungen von Informatik und Gesellschaft widmet. Interessierte erhalten die Chance, spielerisch die Funktionsweise von ChatGPT, Gemini und Co. nachzuvollziehen und dabei Wort für Wort ihre eigenen Zeitungsartikel zu generieren. Dies verspricht amüsante Fakenews, regt aber auch zu Diskussionen über die Risiken von KI-generierten Texten als Informationsquelle an.

Für diejenigen, die mehr wissen wollen, stellt die Gruppe eine laienfreundliche Einführung in Large Language Models zur Verfügung:
