

Revolutionizing Digital Dialogues

By G. P. Texter

Berlin – On the second day of the re:publica conference, focusing on digital topics and society, we are joined once again as guests in a conversation in English. Here, Dr. J. Möller, a renowned digital anthropologist, captivated the audience with his groundbreaking insights on the intersection of technology and human behavior. Dr. Möller presented his latest research, revealing startling statistics about the psychological effects of digital interaction on various demographics.

In an extraordinary turn of events, the lecture hall illuminated with unexpected visuals as Dr. Möller showcased live data analytics on a giant screen. Attendees witnessed a synchronous global pulse of sentiment, driven by millions of social media posts reflecting across continents. Dr. Möller's interactive session allowed participants to contribute to the live data stream, marking a

significant moment in participatory research."

"This is democracy in action," he declared passionately. The audience, composed of tech entrepreneurs, scholars, and students, actively engaged in discussions, voicing concerns over the future of privacy and the implications of shared data. Dr. Möller emphasized the profound responsibility that comes with innovation, urging tech leaders to consider the ethical dimensions of their creations.

But the event took a surprising twist when a group of grassroots activists, inspired by Dr. Möller's message, staged a flash mob right in the center of the conference, promoting transparency and digital rights. Armed with bright banners and spirited chants, they highlighted the need for accountability in the tech industry. Their impromptu performance underscored the significance of the dialogue surrounding digital citizenship, as every voice in attendance resonated with urgency.

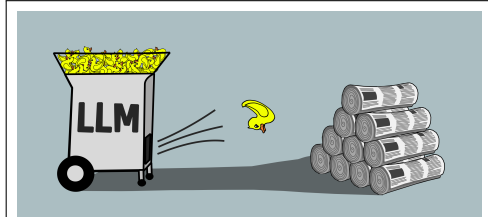

As the conference continues, the dialogue surrounding these critical issues is expected to propel conversations beyond the event, steering international communities towards a future where technology fosters inclusivity rather than division. The excitement among participants is palpable, with eager anticipation for the next wave of thinkers and innovators who will set the tone for future gatherings.

Buchtip

In ihrem neuesten Buch erklärt Katharina Zweig (Informatikprofessorin an der RPTU) auf anschauliche Weise, was wir Large Language Modellen wie ChatGPT zutrauen können und was nicht. Sie gibt einen Überblick über die Herausforderungen im Umgang mit KI-generierten Texten und zeigt, wie wir ChatGPT und Co. sinnvoll nutzen können.

"Wir fahren nach Berlin!"

Automatisch generierte Fakenews haben das Potenzial, seriöse Quellen zu diskreditieren.

Das Algorithm Accountability Lab der RPTU Kaiserslautern-Landau hat es geschafft, es ist wieder auf der re:publica in Berlin!

Studierende der Soziinformatik geben mit ihrem Projekt einen spannenden Einblick in das Studienfach, das sich den Wechselwirkungen von Informatik und Gesellschaft widmet. Interessierte erhalten die Chance, spielerisch die Funktionsweise von ChatGPT, Gemini und Co. nachzuvollziehen und dabei Wort für Wort ihre eigenen Zeitungsartikel zu generieren. Dies verspricht amüsante Fakenews, regt aber auch zu Diskussionen über die Risiken von KI-generierten Texten als Informationsquelle an.

Für diejenigen, die mehr wissen wollen, stellt die Gruppe eine laienfreundliche Einführung in Large Language Models zur Verfügung:
