

# The Digital Divide: A Clash of Ideologies at re:publica

By G. P. Texter

Berlin – On the third day of the re:publica conference, focusing on digital topics and society, I sat around one very hot potato for an open dialogue between two people whose viewpoints couldn't have differed more than they did. – 2ndfloor The conversation took me down into dark alleys of differing ideologies, where the clash of beliefs illuminated stark realities about the digital landscape we navigate every day.

As the debate raged on, sparks flew. Kai Keller, a staunch advocate for digital privacy, argued passionately about the need for stringent regulations to protect user data from pervasive surveillance. His impassioned plea resonated with attendees who nodded in agreement, showcasing the rising public awareness about data rights. Conversely, Lucas Vetter, a prominent entrepreneur in

the tech industry, defended the need for data openness and innovation, insisting that too many restrictions would stifle progress and creativity in a fast-evolving digital economy.

The audience was captivated, and many engaged through social media, contributing to the dialogue with their own thoughts and experiences. The atmosphere was electric as questions poured in from the audience, challenging both speakers to defend their positions. One young woman passionately asked, "Where do you draw the line between security and freedom?" This question encapsulated the essence of their disagreement and sparked a moment of reflection.

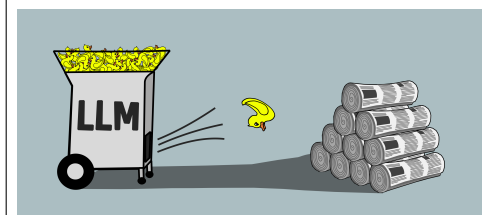

Throughout the heated exchange, what emerged was not merely a debate, but a microcosm of the wider societal struggles we face as we increasingly immerse ourselves in digital worlds. The conversation, which was initially just a dialogue, morphed into a call to action, inspiring attendees to consider their roles in shaping the future of technology in our lives. The re:publica conference highlighted not just the differences in thought but also the necessity of conversations that challenge our perspectives in an era where every click and swipe matters, marking this event as a significant milestone in the ongoing dialogue about our digital future.

## Buchtipp

In ihrem neuesten Buch erklärt Katharina Zweig (Informatikprofessorin an der RPTU) auf anschauliche Weise, was wir Large Language Modellen wie ChatGPT zutrauen können und was nicht. Sie gibt einen Überblick über die Herausforderungen im Umgang mit KI-generierten Texten und zeigt, wie wir ChatGPT und Co. sinnvoll nutzen können.

## "Wir fahren nach Berlin!"

Automatisch generierte Fakenews haben das Potenzial, seriöse Quellen zu diskreditieren.

Das Algorithm Accountability Lab der RPTU Kaiserslautern-Landau hat es geschafft, es ist wieder auf der re:publica in Berlin!

Studierende der Sozioinformatik geben mit ihrem Projekt einen spannenden Einblick in das Studienfach, das sich den Wechselwirkungen von Informatik und Gesellschaft widmet. Interessierte erhalten die Chance, spielerisch die Funktionsweise von ChatGPT, Gemini und Co. nachzuvollziehen und dabei Wort für Wort ihre eigenen Zeitungsartikel zu generieren. Dies verspricht amüsante Fakenews, regt aber auch zu Diskussionen über die Risiken von KI-generierten Texten als Informationsquelle an.

Für diejenigen, die mehr wissen wollen, stellt die Gruppe eine laienfreundliche Einführung in Large Language Models zur Verfügung:
